

# IMMIGRATION DETENTION ABOLITION AND THE VIOLENCE OF DIGITAL CAGES

SARAH SHERMAN-STOKES\*

*The United States has a long history of pernicious immigration enforcement and surveillance. Today, in addition to more than 34,000 people held in immigration detention, Immigration and Customs Enforcement (ICE) shackles and surveils an astounding 376,000 people under its “Alternatives to Detention” (“ATD”) program. The number of people subjected to this surveillance has grown dramatically in the last two decades, from just about 1,700 in 2005. ICE’s rapidly expanding Alternatives to Detention program is a “digital cage,” consisting of GPS-outfitted ankle shackles and invasive phone and location tracking. Government officials and some immigrant advocates have characterized these digital cages as a humane “reform,” ostensibly an effort to decrease the number of people behind bars. This Article challenges that framework, illuminating how, instead of moving us closer to justice and liberation—and toward abolition—digital cages disperse the violence of immigration enforcement and surveillance more broadly, and more insidiously, ensnaring hundreds of thousands more immigrants, families, and communities.*

*The increasing digitization of immigration enforcement and surveillance is part of a growing, and expansive, geography of violence. This Article argues that if we want to take deportation abolition seriously—that is, an end to immigrant detention, enforcement, and deportation—we must consider the impact of this growing surveillance. Building upon*

\* Clinical Associate Professor of Law, Boston University School of Law. Thank you to participants in the 2021 NYU Clinical Law Review Writers’ Workshop and LatCrit 2021 for thoughtful feedback, as well as César Cuauhtémoc García Hernández, Gautam Hans, Lindsay Harris, Laila Hlass, Anil Kalhan, and Julie Mao. Thanks also goes to Boston University School of Law, and Dean Angela Onwuachi-Willig, for summer research grant support for this project. Finally, special thanks to research assistants Carmen Alvarado-Hernandez, Andrew du Bois de Vroylande, Sabrina Geisler, and Catherine Kannam for their excellent work. All errors are my own.

*deportation abolition literature situating immigration detention as a form of violence, this Article posits that rather than mitigate violence, digital cages create a “violence of invisibility” that is equally, if not more, dangerous. Digital cages, masquerading as a more palatable version of enforcement and surveillance, create devastating harms that are hidden in plain sight, while duping us into thinking of these measures as more humane. This Article concludes by arguing that digital cages are a “reformist reform” that merely make more efficient the kind of oppressive and racialized violence that has long informed the United States’ immigration enforcement regime. If we truly seek an end to this violence, this Article argues for abolition—not just of detention, but of digital cages as well.*

## INTRODUCTION

“Elizabeth” wore an ankle shackle that was heavy, painful, and humiliating.<sup>1</sup> Elizabeth had fled to the United States following the murder of her father by gang members, who later threatened her too. Shortly after Elizabeth fled, her mother was also murdered by gang members, and she became the sole caretaker of her traumatized younger siblings, ages five and twelve. She was just twenty-two. Elizabeth was arrested and briefly detained by Immigration and Customs Enforcement (ICE) before being released and fitted with an ankle shackle. Elizabeth had to remember to charge the shackle each night, to be home when the service contractor stopped by for unannounced home visits, and to call at the scheduled time for phone check-ins. She also had to manage her younger siblings’ school, therapy, and childcare, and her own work schedule, as she struggled to make ends meet. Once her shackle was removed, Elizabeth was required to download and install the SmartLINK app on her phone so that ICE could continue tracking her location. Once a week, at a predetermined time, Elizabeth was required to send a “selfie” through the SmartLINK app, so that ICE could confirm her location. She was constantly exhausted and anxious, burdened with the knowledge that ICE had full access to her phone and that if it stopped working or failed to connect to the app, she would be re-detained and separated from her brother and sister.

The surveillance to which “Robert” was subjected brought him to tears. A businessman and political activist in his home country, he was detained and tortured for his pro-democracy efforts before fleeing to the United States. Terrified that a prospective employer or new acquaintance would see the bulky shackle on his ankle, Robert wore long pants all summer long and rarely left the house. He hated being constantly monitored, and he became depressed and embarrassed, longing for the shackle to be removed.<sup>2</sup> He confided in his attorneys that if he

---

1. Elizabeth’s and Robert’s names and identifying details have been changed, but their stories are based on the real, amalgamated experiences of the author’s clients who were all arrested, detained, and surveilled by ICE in New England.

2. Highlighting brief narratives of impacted noncitizens is intentional here and serves as an effort to “explicitly cente[r] the concerns, knowledge and bodies of those who suffer violences that have been forgotten, hidden, or otherwise erased.” Caitlin Cahill & Rachel Pain, *Representing Slow Violence and Resistance: On*

knew he would face the burden of an ankle shackle and accompanying surveillance, he would have opted to remain in detention. Though he and his attorneys pleaded with ICE to remove the shackle, the ICE officer responsible for his case always had to “check with a supervisor”—a supervisor who seemed to never exist or return phone calls. Robert recalls feeling “like I was a prisoner, inside another prison.”<sup>3</sup>

Both Elizabeth and Robert lived with the constant psychological distress, fear, and anxiety that if they—intentionally or not—violated the terms of their participation in ICE’s Alternatives to Detention (“ATD”) program, they could, and typically would, immediately be re-detained by ICE. That if they missed a phone check in, weren’t home when required to be, or forgot to send a photo of themselves or plug in and charge their shackle, ICE might come to their home or place of work and re-detain them in front of their family, friends, or co-workers.<sup>4</sup>

Centering the “situated and embodied knowledge”<sup>5</sup> of impacted individuals like Elizabeth and Robert is a critical starting point if we are to begin to understand the significant impact of the violence wrought by ATD on immigrants, their families, and their communities. This article argues that there is a violence in the ordinary and habituated nature of immigrant surveillance and takes aim at describing one form of this violence—a set of practices I name here as “digital cages.”<sup>6</sup>

L. REV. 587, 606 (2020).

5. Cahill & Pain, *supra* note 2, at 1058 (citing Donna Haraway, *Situated Knowledges: The Science Question in Feminism and the Privilege of Partial Perspective*, 14 FEMINIST STUD. 575 (1988)).

6. This is not dissimilar from the idea of “e-carceration” as theorized by Chaz Arnett and others. Arnett, among others, has described e-carceration as “the outsourcing of aspects of prison into communities under the guise of carceral humanism: the repackaging or rebranding of corrections and correctional programming as caring and supportive, while still clinging to punitive culture.” See Chaz Arnett, *From Decarceration to E-Carceration*, 41 CARDOZO L. REV. 641, 645 (2019); Kate Weisburd, *Punitive Surveillance*, 108 VA. L. REV. 147, 173 (2022)

The immigration enforcement detention and surveillance regime—which includes the interlocking systems of market and government forces making up the detention system, as well as the enforcement, policing, and surveillance systems—has expanded dramatically in recent years. Detention beds, at 18,500 in 2005, are now at 25,000 in the annual ICE budget.<sup>7</sup> Roughly 1,700 immigrants were subjected to electronic ankle shackles as of 2005.<sup>8</sup> As of December 2022, more than 376,000 immigrants were under constant surveillance by ICE through a panoply of electronic monitoring systems, more than quadruple the number enrolled in the program when President Biden took office.<sup>9</sup> The average length of time a noncitizen spends subjected to this surveillance is 325.9 days, as of December 2022.<sup>10</sup> As I describe in more depth in Section II.A, the company contracted to oversee the program has the capacity to increase that number even further—to up to 400,000 enrollees.<sup>11</sup> This electronic surveillance regime includes GPS monitoring through the use of ankle shackles,<sup>12</sup> facial recognition through the SmartLINK phone application, voice verification technology, home monitoring, required reporting to ICE offices, and ongoing

---

(“[S]urveillance technology facilitates a type of incarceration that occurs outside of prison, further demonstrating that prison is no longer the ‘state’s only means of restricting liberty.’ The similarities between physical and digital incarceration have led some scholars to refer to punitive surveillance as a form of ‘e-carceration.’” (citation omitted)); Mary Holper, *Immigration E-Carceration: A Faustian Bargain*, 59 SAN DIEGO L. REV. 1, 2 (2022) [hereinafter Holper, *Immigration E-Carceration*] (“Electronic monitoring imposes pain, shame, arbitrary rules, and limitation of freedom on persons, causing many to experience it as punitive.”).

11. Hellerstein, *supra* note 3.

12. Here I use the term “shackles” instead of the traditional language of “bracelet” to more accurately reflect the experience of the wearer. In so doing, I acknowledge the historical ties between shackles and slavery. Others have made similar connections between immigration detention, labor, and slavery. *See, e.g.*, Anita Sinha, *Slavery by Another Name: ‘Voluntary’ Immigrant Detainee Labor and the Thirteenth Amendment*, 11 STAN. J. C.R. & C.L. 1 (2015).

surveillance. Alternatives to Detention suggests that, normally, individuals in these programs would be subject to ICE detention. Not only is it true that many noncitizens subjected to ATD would never have been detained in the first place, but in fact, the result of the proliferation of ATD has been the growth of *both* immigration surveillance and immigration detention.<sup>13</sup>

These so-called alternatives to detention have gained an enormous following in recent years. Conservative Democrats, advocacy groups, and lawmakers have increasingly pushed for alternatives to immigration detention<sup>14</sup> as a set of “reforms.”<sup>15</sup>

PROGRESS (June 9, 2017), <https://www.americanprogress.org/issues/immigration/news/2017/06/09/433975/alternatives-detention-profit-immigration-system> [https://perma.cc/KYD5-TPTK] (“Alternatives to detention should prevent immigrants . . . from going through the physical and emotional tolls of incarceration.”); Philip E. Wolgin, *Incarcerating Entire Families Cannot Be the Solution to the Separation of Children*, CTR. FOR AM. PROGRESS (June 18, 2018), <https://www.americanprogress.org/issues/immigration/news/2018/06/20/452571/incarcerating-entire-families-cannot-solution-separation-children> [https://perma.cc/GVQ2-CBX3]; *Position Paper: Alternatives to Detention*, AM. IMMIGR. LAW. ASS’N, <https://www.aila.org/File/DownloadEmbeddedFile/40553> [https://perma.cc/JCU3-7F4H] (“Detention deprives individuals of their most fundamental right to liberty and for many immigrants and asylum-seekers, this extreme measure is often unnecessary.”); *The Real Alternatives to Detention*, AM. IMMIGR. LAW. ASS’N (June 18, 2019) [hereinafter AM. IMMIGR. LAW. ASS’N., *The Real Alternatives*], <https://www.aila.org/infonet/the-real-alternatives-to-detention> [https://perma.cc/7LP9-FEPN].

15. I put “reforms” in quotes because, as I explain below, while reforms are typically changes made in the spirit of improvement, in this case, I argue that advocates have advanced these “reforms” despite the significant harms they cause. Put another way, “[t]he notion of ‘reform’ implies that an institution has strayed from its core responsibilities . . . but there is no ‘fixing’ something that works as intended.” MARIAME KABA & ANDREA J. RITCHIE, *NO MORE POLICE: A CASE FOR ABOLITION* 117 (2022).

Often, advocates have pushed for these changes for, ostensibly, humanitarian reasons. Of course, they're not entirely wrong—immigration detention is dangerous,<sup>16</sup> and often deadly to those subject to it.<sup>17</sup> Proponents of ATD also argue that alternatives to detention have proven effective at ensuring compliance with immigration court hearing attendance, a justification consistently offered for immigration detention and surveillance.<sup>18</sup> But at what cost—to Robert, Elizabeth, and those like them, as well as their families and their communities?

This Article uses the term “digital cages” to describe the set of practices associated with ATD, including surveillance and monitoring by ICE, or the private companies ICE works with. I use digital cages as a case study to theorize violence and alternatives to detention as part of the larger deportation abolition project. In so doing, I examine the interlocking systems

(Oct. 22, 2020), <https://www.cato.org/blog/21-people-died-immigration-detention-2020> [https://perma.cc/UA5A-5MBB] (“The FY2020 death rate in ICE immigration detention was 11.8 per 100,000 admissions, a 656 percent increase from FY2019 and just below the highest ever recorded in 2004.”); *Deaths at Adult Detention Centers*, AM. IMMIGR. LAW. ASS’N, <https://www.aila.org/infonet/deaths-at-adult-detention-centers> [https://perma.cc/8ZYG-Y3JW] (June 29, 2023) (listing press releases issued by ICE since December of 2015 announcing deaths in adult immigration detention and discussing violations of medical standards as a notable role in many deaths of immigrants in detention).

18. See Ruthie Epstein, *The Tried-And-True Alternatives to Detaining Immigrant Families*, ACLU (June 22, 2018), <https://www.aclu.org/blog/immigrants-rights/immigrants-rights-and-detention/tried-and-true-alternatives-detaining> [https://perma.cc/9VVQ-QBBP] (“The Family Case Management Program had a 99 percent effectiveness rate — meaning almost every single person enrolled in the program showed up for all immigration appointments and court hearings.”).

of violence and social control in order to forward immigrant justice and liberation.

Deportation abolition, an emerging framework,<sup>19</sup> is “focused on ending policing, detention and deportation in the immigration legal system.”<sup>20</sup> Abolitionists argue that policing is inherently violent;<sup>21</sup> rather than alleviating or ameliorating harm, the carceral state merely “reacts to it.”<sup>22</sup> Whereas immigrant communities and advocates often focus on reforms to the immigration legal system, deportation abolitionists ask not “how can we make what we have better?” but, what would it look like to imagine something entirely new?<sup>23</sup>

Their project—our project—is one of both deconstruction and imagination.<sup>24</sup> What would it look like to create a system free from the oppressive and violent structures that have animated the immigration system until now? What if the carceral state became not a “more polite manager of inequality”<sup>25</sup> but a system *free of* inequality, oppression, and structural violence? I suggest that if we hope to move toward such a system, we must critically evaluate changes to existing structures and systems to ensure that they move us closer to this goal, rather than exist as so-called “reformist reforms”<sup>26</sup> that serve only to make a violent regime more palatable.

26. See Amna A. Akbar, *Demands for a Democratic Political Economy*, 134 HARV. L. REV. 90, 103–04 (2020).

This Article takes as a starting point that detention and deportation are kinds of “violence,”<sup>27</sup> as theorized by Angélica Cházaro and others.<sup>28</sup> The legal violence framework importantly acknowledges the violence inherent in—and essential to—the functioning of the current immigration legal regime.<sup>29</sup> It also underscores the role of the law in enabling and legitimizing this violence.<sup>30</sup> Because violence has the power to shape “space and place,”<sup>31</sup> here I argue that violence can be theorized not only across time, but across space. That this violence is not only temporal, but geographic, and this matters insofar as we hope to end it. In this Article, I strive to “illuminate the terror” of this violence, especially the “mundane and quotidian”<sup>32</sup> kinds of this violence in an effort to move us closer to liberation and justice.

This Article argues that the increasing digitization of immigration enforcement and surveillance is part of an expansive, and still growing, geography of violence and control. This violence is also racialized. Black immigrants are disproportionately more likely to be detained, and if they are released on bond, their bonds are likely to be higher.<sup>33</sup> Black immigrants are also more likely to be shackled through ICE’s so-called “alternatives to detention” program.<sup>34</sup>

This landscape of digital enforcement and surveillance creates a “violence of invisibility,” a term first used by G. Chezia Carraway in 1991, in an article about violence against women of color.<sup>35</sup> Carraway writes that naming and describing

“nontraditional” forms of violence can help “battle the psychological violence of invisibility.”<sup>36</sup> In this Article, I build on that framing to show how the “violence of invisibility” should be theorized for immigration detention and surveillance. I also show how naming this violence can add to the growing conversation around the abolition of immigration enforcement, detention, deportation, and surveillance. I suggest that if we take that possibility seriously, then the violence of electronic monitoring and surveillance must end.

Visibility is “always a question of [who has] the power to see.”<sup>37</sup> Indeed, when we talk about what violence is or is not visible, we are necessarily asking *from whose perspective*.<sup>38</sup> Those who are subjected to the violence can see it clearly—and relentlessly. In some ways, seeing detained immigrants in cages, as depicted in popular media,<sup>39</sup> makes this violence visible to the broader public.<sup>40</sup> But when cages become digitized, when immigrants are effectively caged in their own homes and within their communities, their invisibility to the public grows more

insidious—enabling this violence to spread while “hidden in plain sight”<sup>41</sup> and simultaneously justifying it as “more humane.”<sup>42</sup> This is not to suggest that when noncitizens are detained in jails, detention centers, and prisons that they, or their detention, are always particularly *visible*. Immigration detention is commonly carried out far from public view, in rural communities, distant from lawyers and other resources, and intentionally hidden.<sup>43</sup> Rather, what I suggest here, is that the harms of release on ankle shackles and being subjected to constant electronic monitoring and surveillance still constitute violence, despite assumptions that their impact is presumed to be less. Not only that, but the shift toward increased surveillance and monitoring means that violence is rendered on a much larger scale, with hundreds of thousands more people ensnared.<sup>44</sup> Moreover, noncitizens are expected to be grateful for their good fortune in not being detained in a traditional setting. Unlike their peers, family, and community members who may be stuck in immigration detention, they have the blessing of “freedom.” But what if that “freedom” comes at the cost of a less visible violence, harm, and suffering? The harms that electronic

See *Immigration Detention Quick Facts*, TRAC IMMIGR, <https://trac.syr.edu/immigration/quickfacts> [perma.cc/6CZQ-KAJV] (noting that as of July 2022, 22,886 noncitizens were in ICE Detention, while over 296,000 were in an ICE ATD program.); *ICE Detention Statistics: ATD FY 22 and Detention FY22*, U.S. IMMIGR. & CUSTOMS ENF’T, <https://www.ice.gov/detain/detention-management> [<https://perma.cc/V8K4-3ABK>].

monitoring and surveillance inflict are easily camouflaged by and from those with more power and decision-making.

In Part I of this Article, I describe the current and evolving landscape of immigrant enforcement, surveillance, data collection, and the larger digital cage of immigration enforcement. Part I details the ways in which this expansive enforcement and surveillance regime is (1) multimodal, (2) rapidly changing, and (3) enmeshed in the larger criminal and corporate carceral systems.

In Part II, I examine “digital cages”—the ever-expanding web of monitoring and surveillance that marks so-called “ATD”—as a case study. Here, I discuss how advocates have often pushed for an expansion of alternatives to detention, supposedly as an effort to curtail immigration detention.<sup>45</sup> I show how such discourse—often deemed “progressive” as it purports to move away from the growing carceral system—in fact renders the violence of detention and enforcement less visible to many, and therefore more dangerous. Though people that are not directly impacted interact with formerly detained individuals and those subjected to digital cages who are living and working in our communities, they are often unaware of what individuals experience in ATD. When we can’t see this violence, it is normalized and less likely to be challenged: the “normalized quiet of unseen power.”<sup>46</sup> In this Part, I specifically highlight the significant physical and psychological harms suffered by those subjected to ankle shackles and immigration monitoring and surveillance.

In Part III, I situate this Article within a deportation abolitionist framework. Within this framework, I theorize the contours of the “violence of invisibility,” understanding electronic monitoring and digital cages as part of the larger prison industrial complex, which deportation abolitionists seek to dismantle. In the context of immigration enforcement and surveillance, the “violence of invisibility” refers to the specific, insidious violence rendered by a system of enforcement invisible to those with power. The invisibility itself is violent because it purports to provide something of value to those it regulates—

---

45. In recent years, immigrant advocates have been clear that they see alternatives to detention as focused on case management, and many advocates have decried the increasing use of ankle monitors.

46. Edward W. Said, *The Public Role of Writers and Intellectuals*, *THE NATION* 27, 31 (2001).

namely, freedom from physical incarceration—when in fact, the damaging tradeoffs can be as harmful as physical incarceration. Instead, this violence harms and disempowers people by making them feel like they don’t know their own experience. The insidiousness of this lie exacerbates the violence—the physical and mental pain and humiliation of the ankle shackle, the unrelenting monitoring and surveillance, and the constant risk of (re)detention. I situate the “violence of invisibility” amidst other modes and methods of violence, including “spectacular violence” and “slow violence”.

Finally, in light of the “violence of invisibility” inherent in immigration enforcement reform efforts, this Article asks how the violence of these digital cages manifests in the immigration enforcement and surveillance space, and what we can do to resist, disrupt, and, ultimately, end it. Like other scholars before me,<sup>47</sup> I close by calling for detention and deportation abolition<sup>48</sup>—an end to detention, deportation, and immigrant surveillance. Increased measures for procedural justice and related reforms are popular, but they presume that detention and deportation must continue. In doing so, they often encourage more resources to be diverted to the immigration enforcement system, thereby growing state violence and reducing resources that can truly support community health and safety.<sup>49</sup> Using a framework developed by scholars and movement organizers, I argue that deportation abolition is the only remedy that can sufficiently alleviate the violence of invisibility wrought on immigrant communities by alternatives to detention.

## I. THE IMMIGRANT SURVEILLANCE AND ENFORCEMENT LANDSCAPE

Part I of this Article describes the current landscape of immigrant enforcement and surveillance. Surveillance has become a hallmark of living in the twenty-first century; “surveillance culture” pervades our everyday existence. Theorized by Foucault and Bentham as a mechanism for discipline and social control,<sup>50</sup> surveillance is “the focused, systematic, and routine attention to personal details for the purposes of influence, management, protection or direction.”<sup>51</sup>

The vast immigration surveillance system is marked by several distinctive characteristics. After describing the historic context from which the immigrant surveillance and enforcement regime emerged, I turn to unpacking these characteristics. First, I describe the multimodal nature of this immigrant surveillance and enforcement landscape. Next, I describe how this landscape has rapidly changed and expanded, particularly over the last few years. Finally, I note the ways in which this system is marked by the deliberate intertwining of the criminal legal system and corporate carceral ties.

### *A. Historic Context*

Immigration detention has been a fixture of the United States immigration legal system for more than two hundred years,<sup>52</sup> and a great deal has been written about this history.<sup>53</sup> But detention as the default has not always been the norm, and release from immigration custody on parole or bond has long been a possibility. Immigration detention began in earnest in 1892, with Ellis Island being the first dedicated detention

facility in the United States. Even then, release on bond was available to noncitizens due to lack of bedspace and unsanitary conditions.<sup>54</sup>

In 1893, Congress passed the first law requiring the detention of any person not entitled to admission. At their discretion, immigration officers would release some, mostly White, immigrants on bond.<sup>55</sup> Thereafter, in 1952, Congress passed the Immigration and Nationality Act,<sup>56</sup> which allowed authorities to use their discretion to grant noncitizens release from detention on bond based on community ties and pending a final determination of removability. This, combined with the end of the era of Chinese Exclusion,<sup>57</sup> led to a decline in the systematic use of immigration detention. However, immigration detention was still used as a tool of racial control, including through the targeted detentions and deportations of Mexicans in the 1950s and Haitians in the 1970s.<sup>58</sup> On a larger scale, detention continued to be used relatively infrequently until the 1980s, when detention became the presumption, rather than the exception.<sup>59</sup> More recently, with a combination of domestic policy targeting people of color for drug and property crimes,<sup>60</sup> stepped-up policing and immigration enforcement,<sup>61</sup> and expanding federal grounds of deportation,<sup>62</sup> the detention population has skyrocketed in the last forty years. By 2017, detention numbers reached a record high of more than 40,000

persons in ICE detention on any given day.<sup>63</sup> While today those numbers hover around 22,886,<sup>64</sup> more noncitizens are caught up in the ever-expanding dragnet of immigration enforcement and surveillance than ever before.

### *B. Multimodal Nature of Surveillance and Enforcement*

The rise of enforcement technology and surveillance has paralleled the growth of the carceral state. The immigration enforcement regime is multimodal, dynamic, expansive, opaque, and inextricably linked to the criminal legal system. So-called “big data policing”<sup>65</sup> and big data surveillance are increasingly popular tools in both immigration and criminal enforcement toolboxes. Enforcement regimes are increasingly influenced by—and expanded by—evolving technologies that capture greater numbers of people in their digital nets. This Article builds on the work of immigration law scholars who have begun to document this growth. Anil Kalhan has documented the prolific expansion of technology in the field of immigration enforcement.<sup>66</sup> In the seven years since that article was published, technology and digital surveillance have grown increasingly integral to routine immigration enforcement. Most recently, Eunice Lee has carefully charted the present-day landscape of immigration surveillance and technologies.<sup>67</sup>

Despite some literature describing its structure and scope, the immigration surveillance regime is also notably opaque. As Hannah Bloch-Webha has explained in the criminal space, “new surveillance technology tends to operate in opaque and unaccountable ways, augmenting police power while remaining free of meaningful oversight.”<sup>68</sup> The same can be said for the

immigration context where rapidly expanding surveillance technology is both hidden and unaccounted for.

This is particularly notable because immigration has long been considered “civil.”<sup>69</sup> In 1893, the Supreme Court held that “deportation is not a punishment,”<sup>70</sup> and this axiom has informed more than one hundred years of jurisprudence and policymaking since then.<sup>71</sup> As many scholars have documented, the notion that immigration is civil has yielded a kind of asymmetric incorporation: the harsh enforcement and harsh penalties of the criminal legal system, without any of the attendant procedural safeguards. On the other hand, a debate about whether deportation is civil or criminal can also be limiting in terms of what seems possible. Put another way, “if deportation is a punishment, more process is due, and if it is not, the current lack of protection for those facing deportation suffices.”<sup>72</sup>

While alternatives to detention and accompanying ankle shackles surveil and monitor noncitizens in ways most relevant to this Article, there is an entire regime of additional mechanisms that more subtly—and perhaps more perniciously—surveil immigrant communities.<sup>73</sup> These technologies work—often in tandem—with ATD.

Lee groups these expanding technologies into four broad categories: (1) facial recognition and other biometric scanning; (2) automated license plate readers and surveillance drones; (3)

(2022), <https://americandragnet.org/finding1> [<https://perma.cc/PZ6A-KJ4Y>]. The breadth and depth of ICE’s immigration surveillance regime is startling. Indeed, between 2008 and 2021, ICE spent \$2.8 billion on their new surveillance initiatives.

surveillance by social media; and (4) additional data mining and analytics.<sup>74</sup> I will briefly describe each of these in turn.

### 1. Facial Recognition and Other Biometric Scanning

Facial recognition and other biometric scanning tools have also grown in popularity in the immigration enforcement and surveillance space. Anil Kalhan details the intricacies of facial recognition and biometric scanning, specifically through the Department of Homeland Security’s (DHS) use of the Automated Biometric Identification System (“IDENT”).<sup>75</sup> In 2017, IDENT was replaced with the Homeland Advanced Recognition Technology System (“HART”), a multi-billion dollar, military-grade technology database.<sup>76</sup> In addition to being a clearinghouse for fingerprints, driver’s license information, and passport photos, the HART database will include “facial recognition; iris scanning technology; DNA collection; and ‘additional biometric modalities,’ such as scars, tattoos, and palm prints”<sup>77</sup> of both adults and juveniles.<sup>78</sup> At least 500 million identities can be stored in HART<sup>79</sup> and in addition to DHS, the Department of Defense, the FBI and state and local police will have access to the data collected and stored in HART.<sup>80</sup>

HART exemplifies DHS’s “limitless and brazen”<sup>81</sup> appetite for data.<sup>82</sup> HART will dramatically expand DHS’ surveillance

82. See Collection and Use of Biometrics by U.S. Citizenship and Immigration Services, 85 Fed. Reg. 56338 (proposed Sept. 11, 2020). This rule would have allowed DHS to capture almost anything from anyone—including DNA results,

scope and capacity and has the potential to weaponize information essential to our everyday lives in ways that will be “especially pernicious for already heavily-surveilled and overpoliced Black and Brown communities.”<sup>83</sup>

Facial recognition and surveillance through the SmartLINK phone application has grown increasingly popular tools of immigration enforcement, especially in recent years. SmartLINK is a smart phone technology that uses biometric information, including facial comparison and recognition, to monitor, track, and surveil people in immigration removal proceedings.<sup>84</sup> Today, SmartLINK is ICE’s “monitoring technology of choice.”<sup>85</sup> Between June 2019 and April 2022, the number of people on SmartLINK in the Intensive Supervision Appearance Program (“ISAP”) increased from 12 percent to 76 percent.<sup>86</sup> In some ICE offices, enrollment in SmartLINK has exploded by increases of almost 1000 percent.<sup>87</sup>

## 2. Automated License Plate Readers and Surveillance Drones

As early as 2011, DHS began investigating the use of digital license plate readers—cameras that photograph license plates and store data about those plates, including their information and location.<sup>88</sup> Since then, DHS has spent tens of millions of dollars on this technology.<sup>89</sup> License plate readers used by DHS are both overt and covert—some readers are mounted to CBP

vehicles.<sup>90</sup> Further, DHS uses drones not just to surveil the border, but within the interior of the United States and at times in partnership with other law enforcement agencies to surveil rallies, marches, and protests.<sup>91</sup>

### 3. Surveillance by Social Media

In addition, for more than a decade,<sup>92</sup> DHS has increasingly used social media to surveil and monitor noncitizens.<sup>93</sup> For example, DHS surveils the social media accounts of visa applicants, any noncitizen applying for an immigration benefit. CBP has also begun asking travelers to share their social media handles.<sup>94</sup> Under the Trump administration these processes—known as “extreme vetting”—were expanded and reified.<sup>95</sup> Stored in a database ominously known as the FALCON Search and Analysis System (“FALCON”),<sup>96</sup> these social media photos, posts, “friend lists,” and other data have been used as reasons to

deny visas to intending immigrants, to deny bail to detained noncitizens, and as a basis for deportation.<sup>97</sup>

#### 4. Additional Data Mining and Analytics

DHS's reach is vast, and the use of additional data mining continues to expand. As Lee notes, "ICE owns over 900 unique databases and manages over 10 billion biographic records."<sup>98</sup> Not only does ICE own its own databases, but it has tremendous access to local, state, and federal data through "fusion centers": joint multi-jurisdictional information centers that combine data from various sources and disciplines.<sup>99</sup> According to the DHS Office of Inspector General, fusion centers "house federal, state, and local law enforcement and intelligence resources to provide useful sources of law enforcement and threat information, facilitate information sharing across jurisdictions and functions, and establish a conduit among federal, state, and local agencies."<sup>100</sup> Put more concretely, fusion centers allow DHS to access vast amounts of data through the click of a mouse. Moreover, DHS has recently joined hands with private industry, including Pen-Link and West Publishing, providing additional tools and means for both access and sharing of an alarming

amount of personal information including data on utilities, credit cards, and personal health information.<sup>101</sup>

### *C. Crim-Imm and the Corporate Carceral State*

The intersections between the immigration and criminal legal systems in the United States—so-called “crim-imm”—are long-standing and well documented. César Cuauhtémoc García Hernández and others<sup>102</sup> have noted the ways in which these systems have informed, and advanced, one another. Those changes have been most dramatic—and devastating—over the last forty years. Between 1986 and 1994, Congress passed eight laws and resolutions that stemmed from the “growing desire to fight drugs” and ultimately “set the legislative groundwork for the expansive immigration detention apparatus that exists today . . . .”<sup>103</sup> Included in these laws were expanded definitions for the kinds of criminal offenses that result in mandatory immigration detention and nearly mandatory deportation, even for longtime green card holders.<sup>104</sup> The result was striking: following implementation of these laws, between 1996 and 1998, the number of immigrants in detention nearly doubled, increasing from 8,500 to 16,000.<sup>105</sup> The increasing criminalization of both drugs and poverty fueled the increasing criminalization of immigrants. Deportations also exploded, jumping from just 24,592 in 1986, to 174,813 in 1998.<sup>106</sup>

One particularly insidious feature of both the criminal and immigration enforcement systems is that they are both marked by privatization and corporate control.<sup>107</sup> And the growth of people in criminal legal custody and immigration custody has

107. See Fernandes, *supra* note 14.

been consistent—between 2000 and 2016, the number of people housed in private prisons increased five times faster than the total prison population.<sup>108</sup> Over a similar time frame, the proportion of people detained in private immigration facilities increased by 442 percent.<sup>109</sup> Why is this privatization worth noting? Because privatized incarceration can operate outside federal oversight, it leads to even less accountability, less transparency, and greater impunity.<sup>110</sup>

The number of people detained in these private prisons is significant. As of September 2021, 79 percent of people detained each day in ICE custody are detained in private detention facilities.<sup>111</sup> This didn't happen overnight. In 1983, the world's first private prison company, Corrections Corporation of America ("CCA"), was formed.<sup>112</sup> Shortly thereafter, CCA, since renamed CoreCivic, entered into its first federal government contract for an immigration detention facility in Texas. The following year, in 1984, the GEO Group, formerly The Wackenhut Corporation, was formed.<sup>113</sup>

113. *Detention Timeline: A Short History of Immigration Detention*, *supra* note 55.

Today, contracts for ICE detention make up more than a quarter of total revenue for both CoreCivic and the GEO Group.<sup>114</sup> “In 2019, 29 percent of CoreCivic’s revenue came from ICE detention contracts, for a total of \$574 million.”<sup>115</sup> In 2020, 28 percent of CoreCivic’s revenue came from ICE detention contracts, for a total of \$533 million.<sup>116</sup> Twenty-eight percent of GEO’s revenue came from ICE detention contracts in both 2019 and 2020, at a total of \$708 million in 2019 and \$662 million in 2020.<sup>117</sup>

The GEO Group has expanded its immigration enforcement services beyond the prison walls. Behavioral Interventions (“BI”) Incorporated, a company first established in 1978 to monitor cattle,<sup>118</sup> was acquired by the GEO Group in 2011. Beginning in 2004 with ISAP, ICE’s first iteration of ATD, BI Incorporated and its parent company the GEO Group have run an expanding immigrant surveillance regime.<sup>119</sup> In 2020, the company signed a new five-year contract with ICE for nearly \$2.2 billion dollars to run electronic surveillance on noncitizens.<sup>120</sup> Of course, if noncitizens violate the conditions of electronic surveillance, they are immediately subject to detention—often in a GEO Group or other privately run facility.<sup>121</sup>

Pittman, *supra* note 4, at 606; Dario McCarty, *Private Prison Industry Shifts Focus to Immigrant Detention Centers, Funding Immigration Hawks*, OPEN SECRETS (June 21, 2022), <https://www.opensecrets.org/news/2022/06/private-prison-industry-shifts-focus-to-immigrant-detention-centers-funding-immigration-hawks> [<https://perma.cc/XHB2-VUUY>].

As with incarceration, the immigration system's shift toward monitoring and electronic surveillance has taken cues from the criminal legal system. With prisons and jails past capacity from decades of mass incarceration, electronic monitoring was also touted as an effective solution in the criminal enforcement space. But as with electronic monitoring in the immigration space, in the criminal space, electronic monitoring has resulted in (1) a dramatic increase in the number of people surveilled and (2) very few rights for those under surveillance.<sup>122</sup> In short, this dramatic expansion of surveillance and monitoring has become yet another tech-savvy “enactment of structural racism, and another method of criminalizing and policing poverty – rather than addressing its social roots.”<sup>123</sup> Put another way, the dramatic and swift expansion of immigration surveillance can be seen as another form of what Shoshana Zuboff calls “surveillance capitalism”<sup>124</sup>—a way to capture and commodify the private human experience of living and translate it into valuable data that the state, private companies, and law enforcement can wield for profit, power, and social control.

## II. DIGITAL CAGES

In this Part, I look at one specific example of violence in the rapidly growing immigration surveillance space<sup>125</sup>: digital cages. Here, I discuss how many moderates, liberals, and even progressives have pushed for an expansion of alternatives to detention, specifically ankle shackles, as an effort to curtail immigration detention while ensuring compliance with court attendance, an oft-stated justification for civil immigration

---

122. KABA & RITCHIE, *supra* note 15, at 124 (“Technological ‘fixes’ are not only ineffective, they also operate at cross-purposes to efforts to divest from systems of surveillance, policing, and punishment.”); See James Kilgore, *The Spread of Electronic Monitoring: No Quick Fix for Mass Incarceration*, PRISON LEGAL NEWS (Apr. 9, 2015), <https://www.prisonlegalnews.org/news/2015/apr/9/spread-electronic-monitoring-no-quick-fix-mass-incarceration> [https://perma.cc/C3NP-AQDK] (describing electronic monitoring in the criminal space as a “deprivation of liberty by technological means” and noting that those subjected to electronic monitoring are completely at the “whim of their [parole] agent”).

123. Kilgore, *supra* note 122.

124. SHOSHANA ZUBOFF, *THE AGE OF SURVEILLANCE CAPITALISM: THE FIGHT FOR A HUMAN FUTURE AT THE NEW FRONTIER OF POWER 10* (2019).

125. The immigration surveillance space is vast and growing. Other examples of “violence” in this space are myriad, including but not limited to the use of artificial intelligence, fusion centers and gang databases, private data brokers, social media monitoring, and ICE risk assessment software.

detention.<sup>126</sup> I show how such discourse—often deemed “progressive” as, on its face, it diverges from the physical building of more jails and detention centers—is profoundly harmful. Indeed, this kind of surveillance and monitoring expansion renders the violence of detention and enforcement less visible to those not impacted, and therefore more dangerous. These shifts toward surveillance “rather than detention” are, to use the term coined by philosopher André Gorz and made popular by abolitionist Ruth Wilson Gilmore, “reformist reforms.”<sup>127</sup> That is, rather than work toward the end of immigration detention, these changes neither reduce the scale nor scope of the immigration carceral state and instead, and more insidiously, work to legitimize and expand it.<sup>128</sup>

In the early aughts, community supervision programs for noncitizens in removal proceedings were periodically piloted,<sup>129</sup> but the first official ATD program did not begin until 2004.<sup>130</sup> How did we get here?

For nearly twenty years, moderate, liberal, and progressive advocates have made humanitarian, legal, and financial

---

126. Jayashri Srikantiah, *Reconsidering Money Bail in Immigration Detention*, 52 U.C. DAVIS L. REV. 521, 541–42 (2018). While it is true that a high number of ATD participants appear at scheduled court hearings, scholars have noted that “DHS has placed ankle shackles and other restrictions on those whom it would have otherwise released on no conditions,” resulting in a high appearance rate.; Sara DeStefano, Note, *Unshackling the Due Process Rights of Asylum-Seekers*, 105 V.A. L. REV. 1667, 1682–83 (2019); see, e.g., Fernandes, *supra* note 14; see also Alexia Fernández Campbell, *Trump’s Tent Cities Are An Enormous Waste of Money. There Are Better Options*, VOX (Nov. 2, 2018, 11:56 AM), <https://www.vox.com/2018/6/22/17483230/migrant-caravan-tent-city-cost-trump> [https://perma.cc/8ELU-DT4F]. In addition to this, ATD does not reduce the number of people in detention centers. See Holper, *Immigration E-Carceration*, *supra* note 6, at 31. Moreover, community supervision programs also have high appearance rates, suggesting that private ATD programs are no more successful than community alternatives.

127. See GILMORE, *supra* note 47, at 242; see also ANDRÉ GORZ, STRATEGY FOR LABOR: A RADICAL PROPOSAL 7 (1967).

128. KABA & RITCHIE, *supra* note 15, at 122 (“[R]eliance on technology, just like rules, keeps our focus on individual practices, rather than on underlying systems that enable them. It makes room for one form of domination and control to morph into another form or practice.”).

129. See, e.g., DONALD KERWIN ET AL., THE NEEDLESS DETENTION OF IMMIGRANTS IN THE UNITED STATES 27–28 (2000) (describing community-based supervision program for Mariel Cubans).

130. *Alternatives to Immigration Detention: An Overview*, AM. IMMIGR. COUNCIL 2 (July 11, 2023), [https://www.americanimmigrationcouncil.org/sites/default/files/research/alternatives\\_to\\_detention\\_an\\_overview\\_0.pdf](https://www.americanimmigrationcouncil.org/sites/default/files/research/alternatives_to_detention_an_overview_0.pdf) [https://perma.cc/5CXH-K67X].

arguments for alternatives to detention.<sup>131</sup> In particular, the American Immigration Lawyers Association (“AILA”), a national association of more than 15,000 attorneys and law professors who practice and teach immigration law, advocate for positive change to the immigration legal system, and have significant influence, have pushed for alternatives to detention at least since 2008.<sup>132</sup> They are not alone—the American Immigration Council (“AIC”) and other advocacy groups working toward more fair and just immigration policy also advocate for alternatives. In fact, the first ATD was a small pilot “community supervision” program, driven by the Vera Institute of Justice, an organization “fighting to end mass incarceration.”<sup>133</sup> Between 1997 and 2000, Vera’s community supervision program showed a 90 percent court attendance compliance rate for those facing deportation in New York City.<sup>134</sup>

From a humanitarian perspective, immigration detention is harmful and dangerous. Substandard medical and mental

LAWYERS ASS’N (July 3, 2008), <https://www.aila.org/infonet/aila-position-paper-alternatives-to-detention> [<https://perma.cc/Y2WH-AQZ6>]; see *Strengthening Interior Enforcement: Deportation and Related Issues: Joint Hearing Before the Subcomm. on Immigr., Border Sec. and Citizenship & the Subcomm. on Terrorism, Tech. and Homeland Sec.*, 109th Cong. 2-3 (2005) (statement of Victor Cerda, Acting Director of Detention and Removal Operations, U.S. Immigration and Customs Enforcement). ICE has also consistently pushed for this expanded enforcement and surveillance capability. See *Crossing the Border: Immigrants in Detention and Victims of Trafficking Part I and II: Hearing Before the Subcomm. on Border, Mar., and Glob. Counterterrorism of the H. Comm. on Homeland Sec.*, 110th Cong. 91 (2007) (statement of Victor Cerda, Partner, Siff & Cerda LLP).

132. *AILA Position Paper: Alternatives to Detention*, *supra* note 130. To be fair, there were also prescient advocates who took a more cautious approach. See, e.g., *Crossing the Border: Immigrants in Detention and Victims of Trafficking Part I and II: Hearing Before the Subcomm. on Border, Mar., and Glob. Counterterrorism of the H. Comm. on Homeland Sec.* 110th Cong. 33 (2007) (statement of Michelle Brane, Director, Detention and Asylum Program, Women’s Commission for Refugee Women and Children) (“Some government initiated programs labeled as ‘alternatives to detention’ may in fact be ‘alternative forms of detention.’ This is the case if they impose undue restrictions on an individual’s liberty, even if the individual is not physically held in a prison or prison-like setting.”).

133. *About Us*, VERA, <https://www.vera.org/who-we-are/about-us> [[perma.cc/98LC-QMT7](https://perma.cc/98LC-QMT7)].

134. VERA, COMMUNITY SUPERVISION PROVES DETENTION IS UNNECESSARY TO ENSURE APPEARANCE AT IMMIGRATION HEARINGS 1–2 (2020).

health care,<sup>135</sup> unconsented-to medical treatment,<sup>136</sup> physical and sexual abuse,<sup>137</sup> and death are well-documented inside of U.S. immigration detention centers. Since April 2018, at least thirty-five individuals have died in ICE custody, including deaths by suicide, COVID-19, and other medical causes.<sup>138</sup> Of course, these harms are not confined to the detainees themselves. The devastating ripple effects of immigration detention include detrimental impacts on the children<sup>139</sup> and families of those detained, and on household and community stability.<sup>140</sup> Individual, family, and community health and safety all suffer as a result of immigration detention, and humanitarian arguments against immigration detention are robust. Moreover, as many scholars have argued, there are legal grounds for challenging immigration detention and, by extension, for proposing alternatives to this detention.<sup>141</sup>

141. See Fatma E. Marouf, *Alternatives to Immigration Detention*, 38 CARDOZO L. REV. 2141, 2174, 2179 (2017) (“Failure to consider alternatives to detention other than posting a bond, as well as failure to take an individual’s ability to pay into account when setting a bond, disproportionately results in the detention of indigent persons.”) (“[F]ailure to consider less harsh alternatives to immigration detention may result in the imposition of restrictions or conditions that are excessive and

From a financial perspective, immigration detention is extremely costly, and many have argued that these costs justify the pursuit of alternatives. The United States has long spent a disproportionate amount of money on immigration enforcement, including detention, compared to all other criminal law enforcement.<sup>142</sup> DHS’s budget for fiscal year 2022 estimated an average rate of approximately \$142.44 per day for adult detention beds; in addition, the budget projects a \$271.1 million cost for family beds. In total, the estimated cost of all detention beds amounted to approximately \$1.8 billion for fiscal year 2022. By comparison, electronic monitoring is far more affordable. In 2021, a new ATD pilot program was reported to cost just \$4.43 per day to monitor an adult, or about \$38.47 per family per day.<sup>143</sup>

For these reasons, advocates and policymakers have historically pushed for alternatives to immigration detention—especially for families and those convicted of nonviolent crimes. Starting in 2004, the Intensive Supervision Appearance Program (“ISAP I”) began operation in ten cities<sup>144</sup> through a contract with none other than GEO Group subsidiary BI Incorporated.<sup>145</sup> According to government reports, ISAP I and its predecessors provide “a supervised alternative to detention using technology and case management.”<sup>146</sup> Through the ISAP I program, BI Incorporated “provides electronic monitoring

services . . . either through use of an ankle bracelet that enables Global Positioning System (GPS) monitoring or voice recognition software for telephonic reporting.”<sup>147</sup> This program continues today, as discussed in greater detail below.

Another iteration of Alternatives to Detention is the Family Case Management Program (“FCMP”) operated briefly under the Obama Administration. From January 2016 through June 2017, FCMP operated as an alternative to family detention, primarily for asylum seeking families at the US-Mexico border.<sup>148</sup> FCMP was funded by ICE and “operated on the principle that individuals who receive case management support with their immigration case, as well as support in accessing other services that they may need, will understand and comply with their case requirements, whether the outcome of their case is positive or negative.”<sup>149</sup> The program enrolled 952 heads of households with 1,211 children, for a total of 2,163 individuals in five metropolitan areas around the country.<sup>150</sup> The results, at least from a government compliance standpoint, were impressive, resulting in more than 99 percent appearance rates at ICE check-in appointments and immigration court hearings.<sup>151</sup>

The services provided through the FCMP were managed by a private company, GEO Care, Inc., a subsidiary of the GEO Group which operates numerous prisons and detention centers worldwide.<sup>152</sup> Notably, the GEO Group has been the subject of numerous civil and criminal lawsuits over poor conditions, deaths in custody, and failure to properly pay employees.<sup>153</sup>

Hannah Rappleye & Lisa Riordan Seville, *24 Immigrants Have Died in ICE Custody During the Trump Administration*, NBC NEWS (June 9, 2017), <https://www.nbcnews.com/politics/immigration/24-immigrants-have-died-ice-custody-during-trump-administration-n1015291> [<https://perma.cc/LT8L-ZVJ3>] (noting that GEO Group is the private contractor that operates immigrant detention facilities where deaths have occurred); Christopher Zoukis, *Lawsuit by Washington AG Against GEO Group for Wage Violations Proceeds, Granted Class-Action Status*, PRISON LEGAL NEWS (Dec. 2018), <https://www.prisonlegalnews.org/news/2018/dec/5/lawsuit-washington-ag-against-geo-group-wage-violations-proceeds-granted->

While the program may be considered a success from the point of view of those whose primary concern is court attendance, the program was run by a private prison corporation in concert with ICE—and any violation of the program resulted in detention. The Trump Administration discontinued FCMP in June 2017, citing “high costs” and its failure to deport asylum seekers.<sup>154</sup> Notably, the program cost just \$36 a day—far less than the average daily cost of immigration detention—and those enrolled in the program had a 100 percent compliance rate for court attendance.<sup>155</sup>

So, how did we get here? Steadily, though relatively quietly. The ATD program has grown substantially in the last fifteen years. Between 2006 and 2021, ICE’s budget for the program increased from \$28 million to \$440 million.<sup>156</sup> Today, there are more than 296,000 people enrolled in ATD, yet the program stands to expand further. More than 27,000 people were detained by ICE as of July 2021,<sup>157</sup> a number that is (still) appallingly high. Recently, with the end of Title 42 restrictions on entry and asylum at the border, the Biden Administration vowed that it would not detain families at the border and instead would take the more “humane” approach of using “the full spectrum of our alternatives to detention programs.”<sup>158</sup> But President Biden’s ATD program would capture more than five times the number of persons presently in detention. We should be deeply concerned about the conditions immigrants face in

ATD, the impediments to their real freedom, and the threat of “reform” that looks very close to a different kind of incarceration. Rather than provide a true alternative to detention, ATD appears to simply broaden DHS’s reach, scope, and capacity, ensnaring many more people under its watch than would otherwise be the case. This watch, of course, includes the prospective threat of detention and subsequent deportation for any violation, however minor.<sup>159</sup>

#### *A. BI Incorporated and ISAP*

It was a white paper, written in 1997, suggesting that released noncitizens would flee that opened the door to supervised release as an “alternative to detention.” In that paper, Yale Law Professor Peter Shuck proposed as an alternative the idea of ankle monitors and a contract with a private company to administer them.<sup>160</sup> DHS took Shuck’s advice to heart. It soon contracted with BI Incorporated, which purports to deliver “innovative products and services that offer an alternative to incarceration for community corrections agencies supervising parolees, probationers, or pretrial defendants.”<sup>161</sup> But there is no doubt that BI Incorporated is heavily invested in the continuing carceral system—it is a wholly-owned subsidiary of the GEO Group, a publicly traded corporation that manages private prisons.<sup>162</sup>

Today, “digital cages” are operated by BI Incorporated, which operates the third iteration of the ISAP program or “ISAP III”, a multifaceted surveillance regime that includes (1) orientation and enrollment, (2) home visits, (3) office visits, (4) court tracking, and (5) ongoing surveillance.<sup>163</sup>

In the first phase of ISAP, participants complete forms with biographic, immigration, and family and criminal history and are assigned monitoring devices. The device—typically a GPS

163. Order for Supplies or Services 2–11 (Sept. 8, 2014) (on file with the *University of Colorado Law Review*).

ankle shackle—is then “attached and activated.”<sup>164</sup> BI Incorporated employees determine the particular “service plan” to which a participant will be subjected. “Service plans” can include defining geographic boundaries of travel, taking photographs for facial recognition, or recording voice memos for voice recognition. Participants are also issued a photo identification card. Insidiously, for many program participants, this is the only U.S. government identification they have, or will have, during the course of their immigration proceedings.

Another core component of ISAP is home visits. Home visits by ICE officers, conducted in coordination with BI Incorporated, are not scheduled in advance and are unannounced.<sup>165</sup> Once in the home, ICE officers have wide latitude to look for “evidence of possible flight risk” and to note any “criminal activity” in the home or neighborhood.<sup>166</sup> There appear to be no constraints on the officer’s ability to investigate non-participants who may also reside in the home or general vicinity.

Office visits are also routine. Unlike home visits, however, office visits are scheduled and provide the ICE officer yet an additional opportunity to evaluate the participant’s program compliance and collect biographic information in a setting where questions can be wide-ranging.<sup>167</sup> At office visits, ICE officers are also directed to take note of changes to a participant’s appearance including, but not limited to, tattoos, scars, and facial hair.<sup>168</sup> Such directives provide wide discretion for uninformed assumptions, bias, and racial profiling, especially because lawyers are typically not present to assist in protecting their clients’ rights.<sup>169</sup>

Court tracking is a hallmark of the ISAP Program. Indeed, one of the primary objectives of ISAP, as articulated by its advocates, is ensuring that noncitizens in removal proceedings attend their court hearings. Compliance with court hearing attendance is often cited in defense of ATD programs like

169. See LAILA L. HLAAS & RACHEL PRANDINI, DEPORTATION BY ANY MEANS NECESSARY: HOW IMMIGRATION OFFICIALS ARE LABELING YOUTH AS GANG MEMBERS 2, IMMIGR. LEGAL RES. CTR. (2018), [https://www.ilrc.org/sites/default/files/resources/deport\\_by\\_any\\_means\\_nec-20180521.pdf](https://www.ilrc.org/sites/default/files/resources/deport_by_any_means_nec-20180521.pdf) [https://perma.cc/RZM9-JEQJ].

ISAP.<sup>170</sup> At the same time, failure to attend a court hearing while enrolled in ISAP will almost certainly mean that the participant will be terminated from the ISAP program, an in absentia order of removal will be issued, and the noncitizen will be re-arrested and detained by ICE in order to facilitate deportation.<sup>171</sup>

Of course, a noncitizen's failure to appear in court often correlates to roadblocks outside of their control—including failure to receive proper notice, lack of counsel, language, financial and geographic barriers, and trauma.<sup>172</sup> Moreover, if released from detention, noncitizens must then interact with and report to three separate entities who do not communicate well with one another: (1) ISAP, (2) ICE, and (3) the immigration court. These systems, purportedly intended to promote court attendance and facilitate an immigration legal process, often do much to undermine that very process through multiple sets of confusing rules and expectations. Expecting noncitizens to navigate this “maze of hyper-technical statutes and regulations that engender waste, delay, and confusion” is comical; the system lays traps for noncitizens, the consequences of which are detention and deportation. The “violence” of this kind of bureaucratic banality is outside the scope of this Article, but well worth noting. In short, the high stakes of constant monitoring and surveillance cannot be understated.

Enrollment, home visits, office visits, and court tracking all exist against the backdrop of unrelenting surveillance. So long as the ISAP participant is wearing their GPS ankle shackle, they are constantly being watched and monitored by ICE. The transmitter on the shackle shares the participant's coordinates “at least once every four hours” and in many cases, “every three minutes.”<sup>173</sup> A “continuous reporting” function can also provide real-time updates every thirty seconds, on demand.<sup>174</sup> In short,

the participant's movements are tracked, their whereabouts are known, and should they stray from the geographic boundaries imposed or remove or damage their shackle, re-detention can be swift.

### *B. The Physical and Psychological Harm of Digital Cages*

As the earlier stories of Elizabeth and Robert suggest, the physical and emotional toll of shackling, monitoring, and surveillance are profound. Shackling and constant surveillance impact the daily life of participants, their families, and their communities in multiple and devastating ways.

In a first-of-its-kind report on the harms associated with ISAP and ankle shackles, Tosca Giustini and others summarize the results of surveys of approximately 150 immigrants subject to shackling, data from immigration legal service providers related to nearly one thousand cases, and qualitative interviews with immigrants subject to shackling.<sup>175</sup> The report documents devastating physical and psychological harms, as well as restrictions on physical movement that lead to significant financial loss.

Most startling, 90 percent of survey participants reported that they suffered physical harm due to shackling.<sup>176</sup> Nearly three quarters of participants described aches, pains, and cramps in their legs, feet, or ankles, while more than half described excessive heat and/or numbness resulting from the ankle shackle.<sup>177</sup> One in five surveyed individuals experienced electric shocks from the ankle shackle.<sup>178</sup> Other physical harm included cuts, bleeding, and scarring.<sup>179</sup>

Nearly three quarters of participants reported that the impact of the ankle shackle on their mental health was "severe" or "very severe."<sup>180</sup> Eighty percent of participants reported that the ankle shackle resulted in anxiety, while nearly three quarters of participants described depression and sleeplessness.<sup>181</sup> For many participants, the social stigma associated with the ankle shackle was overwhelming, while

181. *Id.* at 15.

many asylum seekers and trauma survivors also reported that the shackle itself was quite triggering.<sup>182</sup> Others reported social isolation and suicidal thoughts.<sup>183</sup>

In addition, the study found that shackling did not have an impact on only the wearer. The ripple effects of shackling were also well documented, including significant financial hardship, loss of employment, and creating obstacles among caretakers for family or community members.<sup>184</sup> In addition to the damaging physical and psychological impact on families and communities, GPS data from shackling has also been used to carry out large scale raids and other enforcement efforts, ensnaring more noncitizens and their family members in ICE's web.<sup>185</sup>

Ankle shackles are just one example of the many types of digital cages that have devastating impacts on immigrants and their communities. With ICE also expanding its use of SmartLINK, the "No Tech for ICE" campaign has documented the devastating impact of the mobile app on immigrants and their communities.<sup>186</sup> Through first person accounts, the "Tracked and Trapped" report highlights the deep anxiety faced by those subjected to SmartLINK surveillance. Noncitizens describe feeling "a constant sense of being watched," being "controlled," and being "on a leash."<sup>187</sup> They worry that when the app doesn't work as it should, they will be punished and re-detained. Participants describe losing out on job opportunities and living with high, and near constant, levels of stress and fear.<sup>188</sup> The physical and psychological harms of surveillance are devastating to those surveilled, and to their networks of family and community.

### III. DEPORTATION ABOLITION AND THE VIOLENCE OF INVISIBILITY

In part animated by the “Abolish the Police” movement, immigrant organizers, advocates, and scholars have increasingly called for the abolition of ICE and of detention and deportation.<sup>189</sup> Angélica Cházaro was among the first immigration scholars to question the deportation regime, and to advance the idea of abolition as a reasonable goal.<sup>190</sup> Cházaro and others<sup>191</sup> have interrogated both the legitimacy and inevitability of deportation, arguing instead for new thinking about what may be possible if we don’t take deportation’s existence for granted.<sup>192</sup> Cházaro also argues that violence is “at the heart of” deportation and goes on to illustrate the violence inherent in each stage of the process.<sup>193</sup> In proposing abolition as an attainable goal, Cházaro problematizes the notion that deportation must persist in order to maintain social control over noncitizen populations, ensure community safety, and protect U.S. sovereignty—oft-cited justifications for the current enforcement regime.<sup>194</sup> Cházaro and advocates and activists from Mijente, Critical Resistance, and Detention Watch Network have created blueprints for evaluating whether particular changes are simply “reformist reforms” or, in fact, real steps toward abolition.<sup>195</sup> Their framework can be summarized

as asking whether the action (1) reduces the scale and scope of immigration enforcement; (2) chips away at the current system without creating new harms; (3) helps some people at the expense of others; and (4) provides relief to people who could be or are currently detained or surveilled—including asylum seekers, refugees, undocumented persons, longtime green card holders, noncitizens convicted of crimes, recipients of Deferred Action for Childhood Arrivals (DACA), and anyone else who is not yet a citizen of the United States.

Rather than reform a rotten system, Cházaro invites future scholarship that works toward deportation's demise and a future where abolition is possible. This Article responds in part to that invitation.

Deportation is violence. One growing facet of the deportation regime is so-called alternatives to detention, and in particular, ankle shackles and digital cages. In this Part, I explain why it is imperative to name this particular strand of the deportation regime, to categorize the specific kind of violence that the detention and deportation regime produces, and to articulate why it is especially dangerous.

This is especially timely today. As calls to lessen the use of immigration detention mount, the Biden Administration is increasingly pushing for—and achieving—an expansion of “alternatives to detention.” Once, noncitizens might have been released from custody and thus somewhat released from the eyes and ears of immigration enforcement.<sup>196</sup> Now, release from detention can mean ankle shackles and a robust system of monitoring and surveillance by ICE and ICE subcontractors. Through this alternative enforcement regime, noncitizens are effectively caged in their own homes and communities, rather than in jails and detention centers. As use of ankle shackles and accompanying monitoring and surveillance grows dramatically, immigration enforcement becomes less publicly visible. Because noncitizens are inside digital cages—ankle shackles they cover

196. Noncitizens released from detention typically remain in removal proceedings with expectations to appear for Immigration Court hearings. However, unless formally enrolled in ATD programming, these released noncitizens are not subject to monitoring, surveillance, or related reporting.

with long pants, phone calls monitored behind closed doors, and home visits that happen in the early morning before the workday begins—their plight, and the attendant, and often devastating harms, are largely hidden from public view.

### A. *Theorizing Violence*

What is violence? In concrete terms, it is behavior involving physical force intended to hurt, damage, or kill someone or something.<sup>197</sup> More theoretically, and most relevant in this context, I consider violence in the Arendt sense as the capacity to act in concert for a public-political purpose through coercion—rather than consent.<sup>198</sup>

Legal violence is “multi-faceted and multi-sited force—interpersonal and institutional, social, economic and political, physical, sexual, emotional and psychological—violence is endemic, and intimately interwoven with other sorts of relations.”<sup>199</sup> We encounter “the ignominious expression of violence in virtually every facet of our everyday existence.”<sup>200</sup> Systemic violence permeates the legal system; in fact, in many cases, the law generates violence.<sup>201</sup> And, as Arendt reminds us, violence “needs implements”—that is, the tools to carry it out.<sup>202</sup> Alternatives to Detention—and the technology that accompanies, enables, and perpetuates them—are these implements.<sup>203</sup>

This Section begins by describing the different kinds of violence and how they have been theorized. One of those forms of violence, I suggest, is a kind of “violence of invisibility.” I explain how this violence manifests in the immigration surveillance space, and why it matters. The paradigm of the “violence of invisibility” builds on the theoretical framing done

by others in discussing different forms, modes, and methods of “violence.”

Scholars have been resolute in their efforts “to make visible what often goes unseen and unsaid, to reckon with the endings that are not over.”<sup>204</sup> In so doing, they challenge “the ways that the normal and banal are mobilized to obscure violence, terror, and death.”<sup>205</sup> The violence, terror, and even death are what I hope to expose by naming the violence of a largely invisible surveillance regime that patrols, polices, and cages noncitizens.

Many authors have written of the speed of violence and its impact on marginalized people and places. Rob Nixon has written of “spectacular violence”—that is, violence that is “immediately sensational, and [provides an] instantly hypervisible image.”<sup>206</sup> In the context of immigration enforcement, “spectacular” violence might include images of children in cages near the border<sup>207</sup> or children being ripped from their parents by ICE officers at the height of the family separation crisis.<sup>208</sup> By contrast, “slow violence” is “incremental and accretive.”<sup>209</sup> In the immigration context, it might include the violence of long queues to obtain a family sponsored visa, or the violence of a behemoth and intractable bureaucracy that adjudicates immigration benefits.<sup>210</sup>

An unmarried child of a US Citizen who wishes to immigrate from Mexico must wait an astonishing twenty-three years, *Visa Bulletin for January 2022*, U.S. DEPT OF STATE, <https://travel.state.gov/content/travel/en/legal/visa-law0/visa-bulletin/2022/visa-bulletin-for-january-2022.html> [<https://perma.cc/P6MF-5TML>]. Outside the scope of this paper are the ways in which bureaucracy “makes possible, facilitates, and perhaps even causes the thoughtless

Violence in the context of immigration can be theorized as “slow death” and “slow violence.” Stephen Lee has written of temporal violence, and “slow death” and “slow violence” more deeply in the context of immigration. Lee notes that the concept of slow death is one that allows us to see the “widespread suffering that deserves condemnation but evades meaningful detection.” Lee explains that slow death “helps us see what is ignored and muted. Rather than ‘[f]alling bodies, burning towers, exploding heads, avalanches, volcanoes, and tsunamis,’ slow violence captures ‘[s]tories of toxic buildup, massing greenhouse gasses, and accelerated species loss due to ravaged habitats’—harms which are also ‘cataclysmic, but . . . in which casualties are postponed, often for generations.’”<sup>211</sup> Lee argues convincingly that “slow death offers a paradigm that helps identify unspectacular and therefore hard-to-notice acts of family separation such as those that occur within the context of immigration admissions, enforcement, adjustment, and transnational banking” and that the slow death paradigm can help us understand, and push back against, the normalization of immigration suffering.<sup>212</sup>

In the criminal legal system, scholars have noted the “slow violence” of modern day policing.<sup>213</sup> Kramer and Remster explain how slow violence is attritional and unseen.<sup>214</sup> The slow violence of policing is not just the physical violence inflicted on those stopped, arrested, and detained by police, but the broader impact on that individual’s family and community.<sup>215</sup> Understanding slow violence—in contrast to fast or spectacular violence—also helps us focus on how society normalizes and reifies social inequity *through* this violence.<sup>216</sup>

216. See Holper, *Immigration E-Carceration*, *supra* note 6, at 7 (“Starting in the 1980s, there was a shift in policy, resulting in the use of immigration detention as the norm instead of the exception.”).

Importantly, Jenna Marie Christian and Lorraine Dowler have complicated the binary of slow and spectacular violence,<sup>217</sup> noting that feminist scholars have long theorized different kinds of violence not only in consideration of their pace, but through the lens of “gendered and raced epistemologies that privilege the public, the rapid, the hot, and the spectacular.”<sup>218</sup> Christian and Dowler argue for a dismantling of the binary, “calling for us to see the political and geopolitical dimensions of the not so extraordinary—spaces and rhythms of life that are too often ignored.”<sup>219</sup>

Why does naming this violence matter? Understanding and theorizing different forms of violence is important because violence is rooted in complex histories of colonialism, slavery, racism, and other inequitable structures.<sup>220</sup> To name this violence matters because it erodes its reification and reproduction; it brings this violence out into the light, gives it meaning, and opens the door to dismantling it. So, too, is the case in the immigration space.

### *B. The “Violence of Invisibility”*

Spectacular violence and slow violence are both temporal, measured by their speed over time. By contrast, the “violence of invisibility” is geographic. Black feminist scholars have long noted that “the very pervasiveness of violence can lead to its invisibility.”<sup>221</sup> Framing certain immigration enforcement practices within the paradigm of the “violence of invisibility” is useful because it surfaces the lie in these practices, collectively known as “alternatives to detention.” Surfacing this lie reveals the violence in offering an alternative that still surveils, still cages, still monitors, and still ostracizes and stigmatizes.

There is additional value in naming and describing the “violence of invisibility.” Spectacular violence, in particular, is a

---

217. Often seen as “slow” violence versus “spectacular” violence, but as Christian and Dowler explain, the binary—which they seek to disrupt—could also be framed as “personal and political, hot and banal, violence and peace, and intimacy and war.” Jenna Marie Christian & Lorraine Dowler, *Slow and Fast Violence: A Feminist Critique Binaries*, 18 *ACME: AN INT’L J. FOR CRITICAL GEOGRAPHIES* 1066, 1067, 1070 (2019).

problem of excess—“spectacle as the route to empathy means the atrocities itemized need to happen more often or get worse, to become more atrocious each round in hopes of being registered.”<sup>222</sup> As Mariame Kaba has explained, only highlighting “the spectacle” leaves us having to ratchet up the level of suffering in order to attract even a modicum of empathy.<sup>223</sup> When violence is invisible, when we lead those subjected to it to believe that it is not happening, the lie is even more insidious, and the danger it can sow is more catastrophic. Indeed, “[t]o make someone invisible is [itself] an act of violence.”<sup>224</sup> When noncitizens are released from custody and placed in so-called ATD programs, we lead them to believe that what is happening to them is a benefit, a blessing, a better option. When in fact, they continue to suffer.

As noted earlier, the term “violence of invisibility” is mentioned for the first time in a 1991 article about violence against women of color.<sup>225</sup> Other works describe “invisible violence” or “legal violence” particularly as they relate to domestic violence, sex work, and immigration law.<sup>226</sup> Legal violence—or sanctioned, legalized, or social suffering—is also distinct from “the violence of invisibility.” The former describes the ways in which our state and federal laws enable or perpetuate harm, while the latter is about not what is legal, but what is visible.<sup>227</sup> Though, the violence’s legality and the credibility it gets from being state-sanctioned may make it both harder to undo and more harmful.

227. *See* Menjivar & Abrego, *supra* note 226.

The field of political geography can help us understand violence as not just an expression of power, and not just as a result or an outcome. Violence, rather, can be described as a “processual and unfolding moment”<sup>228</sup> that occurs over time. It is also an event that occurs across *space*; an event or series of events that do not exist only “through their location-based implications.”<sup>229</sup>

In part because legal literature has given little attention to this framework, this Article relies on the scholarship of political geographers who are useful guides in theorizing the “violence of invisibility” because they can help us understand how space, place, and time shape violence.<sup>230</sup>

Political geographers can help us see the unjust uses of human power, “the normalized quiet of unseen power,”<sup>231</sup> and the violence wrought through what is not visible, except—and *especially*—to those experiencing it. The largely invisible suffering experienced by noncitizen communities in ATD is exactly the kind of harm “whose ordinariness *is* [its] violence.”<sup>232</sup>

So-called alternatives to detention, including ankle shackles and the broader menu of surveillance and tracking programs, are violent in the ways that they are invisible to those with power and those not subjected to their constant surveillance and monitoring.<sup>233</sup> They are violent because they have become “ordinary” and “mundane.” Ankle shackles and related surveillance perform the lie that the enforcement regime known as “Alternatives to Detention” is different, more benign, and gentler. Violence in this way is “incremental and accretive, its calamitous repercussions playing out across a range of temporal scales.”<sup>234</sup> As explained above, this slow creep of surveillance and its attendant harms is devastating to those it impacts.

And there is significant harm in the failure to recognize the legitimate suffering that this kind of monitoring and

surveillance creates.<sup>235</sup> Ankle shackles and constant monitoring and surveillance cause this harm while simultaneously expanding the breadth of immigration enforcement and surveillance, thereby generating greater harm and dispersing it more broadly.

#### IV. THE VIOLENCE WROUGHT BY DIGITAL CAGES DEMANDS ABOLITION

The violence of detention, deportation, and now alternatives to detention, is irrefutable. Insofar as we hope to both move away from this violence and closer to justice, what would that require?

Too often, those of us who seek justice ask, “what do we have now, and how can we make it better?”<sup>236</sup> Instead, Kaba and other abolitionists encourage us to ask, “what can we imagine for ourselves and the world?” Put another way, how can we address or repair harm in ways that do not rely on the same kinds of structural oppression and violence that got us here? What world would we dream up if we could?

Using a framework created by abolitionists and movement workers, this Part will work through a series of questions to evaluate whether and how the violence of ATD and ankle shackles is the kind of “reformist reform” that perpetuates a deeply violent system, or, instead, works toward its demise. I use this framework intentionally. Regrettably, those of us who write about justice do so alone or with each other, rather than in conversation with those impacted. By taking cues directly from abolitionist scholars and movement organizers, I seek to bring my scholarship more into dialogue with those doing the important work of moving us closer to liberation and justice.

The abolitionist framework I employ is modeled on the work of Angélica Cházaro, Mijente, Detention Watch Network, and Marbre Stahly-Butts and Amna A. Akbar.<sup>237</sup> The following

inquiry proceeds through the four questions, outlined below, designed to ensure that rather than inadvertently creating or replicating new systems of violence, we dismantle and replace them.<sup>238</sup>

To begin, we ask whether ankle shackles and ATD reduce the scale and scope of immigration enforcement. In short, they do not. In fact, ATD vastly increases the number of persons subject to the monitoring and surveillance of ICE and its subcontractors. In addition to the 40,000 people in detention, ATD, at present, ensnares over 376,000 more. Each of these individuals is subject to constant monitoring and surveillance, as are others with whom they reside.<sup>239</sup> If a noncitizen with an ICE-administered ankle shackle fails to comply with the terms of their “release,” they can be immediately detained by ICE. ATD, rather than offering a step toward abolition, expands the scale and scope of detention enforcement exponentially.

Next, we ask whether ankle shackles and ATD chip away at the current system without creating new harms. They do not. ATD presumes the need for an immigration carceral system that incorporates technology to surveil and monitor large numbers of noncitizens. ATD grows the national budget and political appetite for immigration enforcement, and in fact, diversifies the menu of more politically palatable options available to enforce US immigration law. In so doing, ATD creates new, and more disparate—and insidiously invisible—harms. The violence of immigration enforcement is now extended in breadth and scope under the guise of reform.

POST (Sept. 28, 2017) <https://www.washingtonpost.com/world/national-security/deportations-fall-under-trump-despite-increase-in-arrests-by-ice/2017/09/28> [perma.cc/DE8V-U9R9]; see also Michael Barbaro, *‘The Daily’: A Day with I.C.E.*, N.Y. TIMES (July 31, 2017) <https://www.nytimes.com/2017/07/31/podcasts/the-daily/the-daily-a-day-with-ice.html> [perma.cc/X5LX-QFBP].

Third, we ask whether ankle shackles and ATD help some people at the expense of others. That is, do we sacrifice the wellbeing, safety, and freedom of some, for the benefit of others? Most certainly, yes. To be eligible for ISAP III, the third iteration of the program, participants must be eighteen years of age or older and at some stage of their removal proceedings.<sup>240</sup> Statistics show that 90 percent of participants in ISAP III have not been convicted of a crime.<sup>241</sup> During a similar time period, ICE statistics reveal that about 90 percent of those detained *had* been convicted of a crime or had criminal charges pending.<sup>242</sup> ISAP III clearly preferences for enrollment those noncitizens who have not had any interaction with the criminal legal system. What's more, individuals whose citizenship is recorded as Mexico and the Northern Triangle make up 88 percent of those enrolled in ATD.<sup>243</sup> The same group, over a similar time period, makes up only 52 percent of those detained, suggesting a preference for detention for those who are not from Mexico and the Northern Triangle.<sup>244</sup>

And finally, we ask whether ankle shackles and ATD provide relief to people who could be or are currently detained or surveilled. Again, they do not. ICE itself concedes—seemingly proudly—that ATD programs “should not be considered ... a substitute for detention.”<sup>245</sup> Instead, according to DHS, “these programs have enhanced ICE’s ability to monitor more intensively a subset of foreign nationals released into communities.”<sup>246</sup> ICE’s ISAP III goal—casting a wider net to ensnare more individuals and families—will achieve far greater and more pervasive violence than detention alone. ATD does not provide relief for people who could be or are currently detained or surveilled. Rather, these programs expand and entrench surveillance and reify systems of enforcement while dangerously advertising themselves as something more benign.

ICE's Alternatives to Detention program is a "reformist reform" that relies on the same oppressive and violent structures as traditional immigration detention that result in significant physical and mental harm to noncitizens, their families, and their communities. ATD "improves" or makes more efficient a system built on punishment, banishment, and social control. By explicitly naming this kind of violence—this violence of invisibility—we can take aim at ending it.

## CONCLUSION

Noted lawyer and scholar Michelle Alexander says of digital enforcement, "[m]any of the current reform efforts contain the seeds of the next generation of racial and social control, a system of 'e-carceration' that may prove more dangerous and more difficult to challenge than the one we hope to leave behind."<sup>247</sup> What if, instead of improving upon an inherently violent system by offering more "benign" and efficient alternatives, we sought to end it? Digital cages cannot provide a panacea when they come packaged as part of a violent and oppressive enforcement regime. The rate at which ICE has expanded its menu of digital enforcement offerings is staggering. Instead of reducing harm and violence, digital cages have expanded the breadth and depth of ICE's enforcement reach. If we are serious about abolition, we must end not only the brick-and-mortar carceral state, but the digital cages that seek to replace it.
